SUMMARY

Data Scientist with 5 years of experience building production machine learning systems, experimentation platforms, and decision intelligence products at large-scale technology companies. Strong background in Python, SQL, causal inference, forecasting, recommender systems, LLM evaluation, and cloud-based ML deployment. Experienced partnering with product, engineering, and business teams to convert ambiguous problems into measurable business impact.

TECHNICAL SKILLS

Languages: Python, SQL, R, PySpark, Scala, Bash

ML / Statistics: XGBoost, LightGBM, Random Forest, logistic regression, time-series forecasting, uplift modeling, causal inference, A/B testing, Bayesian methods, NLP, LLM evaluation

Data / Cloud: Spark, Databricks, Airflow, Kafka, Snowflake, BigQuery, AWS SageMaker, GCP Vertex AI, Docker, Kubernetes, MLflow

Visualization: Tableau, Looker, Streamlit, Plotly, matplotlib, Power BI

PROFESSIONAL EXPERIENCE

Google - Senior Data Scientist, Search & Recommendations

Mountain View, CA | Jul 2024 - Present

- Led ranking-quality analysis for a consumer search surface serving 80M+ monthly users; built offline evaluation datasets and model diagnostics that improved relevance NDCG by 6.8%.
- Designed LLM-as-a-judge evaluation pipeline for query-intent matching, reducing manual review volume by 42% while maintaining 0.91 agreement with expert labels.
- Partnered with ML engineers to productionize feature monitoring in Vertex AI and BigQuery, cutting model drift detection time from 5 days to under 12 hours.
- Owned experimentation readouts for 15+ launches; used CUPED, sequential testing, and heterogeneous treatment-effect analysis to identify user segments with highest incremental lift.

Meta - Data Scientist, Monetization Analytics

Menlo Park, CA | Aug 2022 - Jun 2024

- Built conversion-lift and advertiser-value models across ads ranking surfaces, contributing to an estimated \$38M annualized revenue opportunity.
- Developed a PySpark-based feature pipeline processing 4B+ daily events; reduced dashboard latency by 35% and enabled near real-time product health monitoring.
- Created causal inference framework using propensity score weighting and difference-in-differences to measure incrementality of bidding-strategy changes.
- Launched anomaly detection alerts for spend, CPA, and conversion-rate shifts; reduced false alarms by 28% through seasonality-aware thresholds and hierarchical clustering.

Amazon - Data Scientist, Marketplace Trust

Seattle, WA | Jul 2020 - Jul 2022

- Built fraud-risk classification models for marketplace seller activity using gradient boosting and graph-derived features; improved precision at top review queue by 19%.
- Designed SQL and Spark pipelines to unify seller, listing, transaction, and customer-contact data across 12 source systems.
- Ran A/B tests for enforcement-policy changes, balancing buyer-risk reduction against seller false-positive impact and operational review capacity.
- Developed executive-facing Looker dashboards tracking risk exposure, model performance, appeal outcomes, and investigator throughput.

SELECTED PROJECTS

LLM Job Matching Evaluator: Built a prototype MCP-compatible service that retrieves live job postings, extracts seniority and skill requirements, and uses an LLM judge to score fit against candidate preferences. Implemented structured JSON outputs, confidence thresholds, and audit logs for judge rationales.

Demand Forecasting Platform: Developed a hierarchical forecasting model for weekly product demand using LightGBM and Prophet-style seasonal features; improved WAPE by 14% versus baseline moving-average forecasts.

EDUCATION

University of California, Berkeley - M.S. in Statistics, Data Science Track | 2020

University of Michigan - B.S. in Computer Science and Mathematics | 2018

CERTIFICATIONS

AWS Certified Machine Learning - Specialty | Google Cloud Professional Data Engineer | Databricks Certified Machine Learning Professional
